

The **MJ816** is a 3-LED bicycle light designed for mountain biking. **Price: R2097.00 incl VAT**

It consists of 3 light pod's in one neat package. There are many bike lights on the market which feature multiple LED configurations, however not many of these offer a truly well thought-out design. They merely increase the light output, whilst doing nothing to ensure that the light is focused and aimed exactly where you need it.

The centre pod on the MJ816 holds a 900-Lumen SSC P7 LED. The beam generated by this LED is optimally shaped to illuminate objects in the trail some distance ahead of you.

The 2 outside pods work in tandem to provide a closer-focused beam, with a lateral spread of light. This is particularly useful in winding singletrack, where seeing around the next corner is important.

The light is controlled by a unique, handlebar mounted remote control. The thumb-operated remote control makes changing modes as easy as changing gears. No need to take your hands off the handlebars.

The MJ816 features 3 basic modes, which are activated by sequential presses of the remote button:

1. 1st press: Just the pair of outside beams on
2. 2nd press: Just the centre beam on
3. 3rd press: All 3 beams on

In addition, each of the 3 modes can be infinitely adjusted by means of a dimmer function built in to the light. Hold the switch in and the light fades until you release it, or it reaches the minimum threshold. Hold it in again and the brightness increases until you release it, or it reaches maximum output.

This great feature means that you can squeeze the maximum amount of riding time out of your battery by using it on an economical setting (up to 250 hours with the Standard battery). There's no need for riding up a slow climb with 1400 blazing lumens. You can save the Max setting for the fast descents or really technical sections of your ride.

As if that's not enough, the designers have crammed more useful features into this package. The MJ816 features a "fuel gauge". The illuminated handlebar-mounted switch changes colour from Green -> Blue -> Orange -> Red as the battery gets depleted. So you're always informed and in control to ensure your light doesn't suddenly die on you in the middle of your ride.

The MJ816 comes with a 4.4AH lithium ion Smart battery. The battery features a built-in touch activated fuel gauge so you can easily check its charge level and voltage.

This all-weather battery features a hard protective casing which has an IP67 (dust and waterproof) rating.

The MJ816 includes a quick-release handlebar mount bracket. The clamp mounts securely onto your handlebars and allows you to easily clip the light on and off. The bracket ensures that your light always remains pointed where you need it - on the trail.
